DETAILED ACTION

Continued Examination Under 37 CFR 1.114

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after allowance or after an Office action under *Ex Parte Quayle*, 25 USPQ 74, 453 O.G. 213 (Comm'r Pat. 1935). Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, prosecution in this application has been reopened pursuant to 37 CFR 1.114.

Applicant's submission filed on January 7, 2003 has been entered.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim 11 recites the limitation "the rotating pivot" in claim 9. There is insufficient antecedent basis for this limitation in the claim.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

Art Unit: 2873

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1, 2, 23, 24, 25, 27 and 29 are rejected under 35 U.S.C. 102(b) as being anticipated by Bacich (USPN 4733945). Bacich teaches an optical holding device having all of the claimed limitations including a first holding means (85) in communication with an outer edge of a first optical element (Figure 2A), a drive mechanism and a return mechanism (184), a second holding means for a second optical device (86) and an inner ring to which the outer edge of the first optical element is attached (175).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 9, 10, 12, 14, 19, 21 and 22 are rejected under 35 U.S.C. 103(a) as being unpatentable over Bacich as applied to claims 1, 2, 23, 24, 25 and 27 above, and further in view of Spinali (USPN 6400516). Bacich teaches all limitations presented in the instant invention but fails to teach the actuator being tangential to the connecting member. Spinali does teach an optical holding device with an actuator tangentially connected to the optical element connecting means. Therefore it would have been obvious to one of ordinary skill in the art at the time the invention was made to combine the optical holding device of Bacich with the tangential actuator for an

Art Unit: 2873

optical holding device of Spinali to provide sufficient constraint of the optical mounting assembly in which the proper amount of force is exerted without unduly changing the optical characteristics of the optic.

Allowable Subject Matter

Claims 3-8, 13, 15 - 18, 20, 26 and 28 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims. The prior art taken either singularly or in combination fails to anticipate or fairly suggest the limitations of the dependent claims, in such a manner that a rejection under 35 U.S.C. 102 or 103 would be proper. The prior art fails to teach a combination of all the claimed features of the instant invention, for example, the measuring device disposed between the first holding member and the connecting member and the heat insulation element.

Claims 30-35 are allowed.

The prior art taken either singularly or in combination fails to anticipate or fairly suggest the limitations of the independent claims, in such a manner that a rejection under 35 U.S.C. 102 or 103 would be proper. The prior art fails to teach a combination of all the claimed features as presented. The limitations of the instant invention found in independent claim 33 such as the outer ring monolithically formed with the inner ring and having a drive mechanism to move the inner ring, a displacement increasing means formed in the outer ring and a guide mechanism for transferring an actuator in a direction substantially along the optical axis, are not taught or fairly suggested by the prior art.
